

# OUR CARE

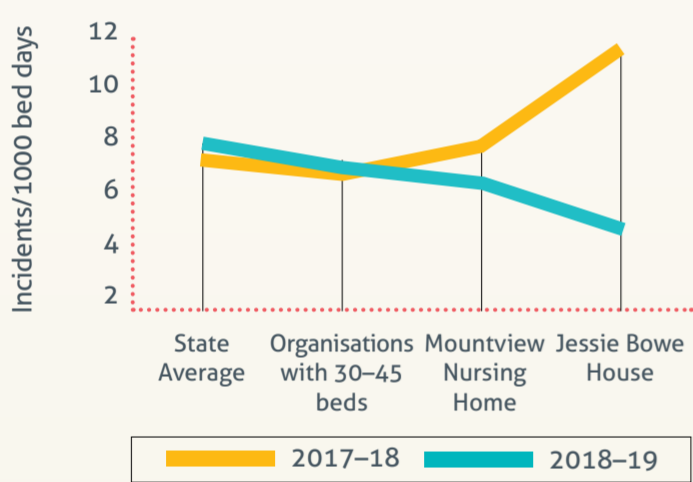

## Introduction

As the smallest hospital in the state we have ensured we continue to pay thoughtful and sustained attention to objective measures of quality and safety including comparing our results with similar-sized health services, health services in the local region and evidence-based best practice.

## Clinical Monitoring

### Fall Incident Rates

### Fractures (caused by a fall) Incident Rates

## What do we do to prevent falls?

- Regular assessment of client's risk of falls
- Develop individualised falls prevention plan with implemented strategies
- Resident's falls risk is reviewed after a fall and/or at dedicated time intervals to confirm level of risk
- Register and analyse all falls that occur on the incident data base to see if there can be steps taken to reduce the risk of that person falling again
- Make equipment available to support staff to monitor residents' safety, including movement mats
- Make appropriate referrals to allied health for review

### Pressure Injuries Stage 1 Incident Rates

### Pressure Injuries Stage 2 Incident Rates

### Pressure Injuries Stage 3 and Stage 4 Incident Rates

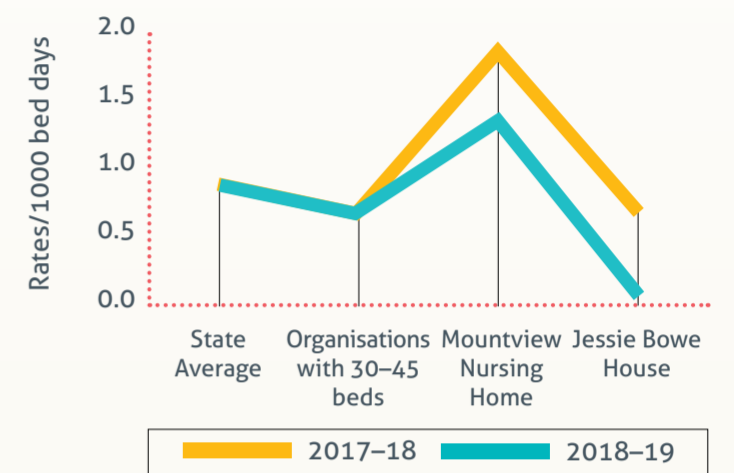

Maldon Hospital has had no Stage 3 or Stage 4 pressure injuries during this reporting period, which is consistent with previous years.

## What do we do to prevent pressure injuries?

They include:

- Complete an assessment on admission to determine the degree of risk of pressure injury
- Develop a care plan with strategies to reduce the likelihood of pressure injury occurrence
- A cue sign near the resident's bed to alert staff to be vigilant is utilised
- Pressure reducing mattresses
- Nutritional status reviews

### Significant Weight Loss Rates

### Unplanned Consecutive Weight Loss Rates

### Physical Restraint Incident Rates

### Multiple Medication Prescription Rates
